**Direction (6-10):** A passage is given with 5 questions following it. Read the passage carefully and choose the best answer to each question out of the four alternatives.

The long-term trends for flood impact in India have been one of declining loss of lives and cattle since the decadal high of 1971-80, but rising absolute economic losses, though not as a share of GDP. It is important, therefore, to increase resilience through planning, especially in cities and towns which are expanding steadily. Orderly urban development is critical for sustainability, as the mega flood disasters in Mumbai and Chennai witnessed in this century make clear. It is worth pointing out that the response of State governments to the imperative is tardy and even indifferent. They are hesitant to act against encroachment of lake catchments, river courses and floodplains. The extreme distress in Chennai, for instance, has not persuaded the State government against allowing structures such as a police station being constructed on a lake bed, after reclassification of land. Granting such permissions is an abdication of responsibility and a violation of National Disaster Management Authority Guidelines to prevent urban flooding. As a nation that is set to become the most populous in less than a decade, India must address its crippling cycles of drought and flood with redoubled vigor. Scientific hydrology, coupled with the traditional wisdom of saving water through large innovative structures, will mitigate floods and help communities prosper.

**Q6.** According to the passage, it is important to increase resilience through planning, especially in which types of cities and towns?
