**Comprehension:**

Read the passage and answer the questions given below:

The 2004 earthquake and tsunami in Banda Aceh, Indonesia, stunned the world. It killed over 230,000 people, and caused damage as far away as Africa. Less than a year later, an earthquake in Pakistan killed 80,000 people. Earthquakes are sudden movements in the earth's crust that occur along faults (planes of weakness), where one rock mass slides past another one. When movement along faults occurs gradually and relatively smoothly, it is called creep or seismic slip and may be undetectable to the casual observer. When friction prevents rocks from slipping easily, stress builds up until it is finally released with a sudden jerk. The point on a fault at which the first movement occurs during an earth-quake is called the epicenter.

Earthquakes have always seemed mysterious, sudden, and violent, coming without warning and leaving ruined cities and dislocated landscapes in their wake. Cities such as Kobe, Japan or Mexico City, parts of which are built on soft landfill or poorly consolidated soil, usually suffer the greatest damage from earthquakes. Water-saturated soil can liquify when shaken. Buildings sometimes sink out of sight or fall down like a row of dominoes under these conditions.

**SubQuestion No : 46**

Q.46

Main cause of earthquakes can be considered as:

1. Volcanic eruptions
2. Sudden movements in the earth's crust along faults
3. Flood
4. Extreme weather conditions

- Options
1. 1
  2. 2
  3. 3
  4. 4

Q.56

Match the LIST-I with LIST-II

LIST-I		LIST-II	
A.	$\dot{V}O_2$	I.	Fractional Concentration of $O_2$ in inspired gas
B.	$F_{IO_2}$	II.	Mean capillary $O_2$ pressure
C.	$\bar{P}_{EO_2}$	III.	Alveolar $O_2$ pressure
D.	$P_{AO_2}$	IV.	$O_2$ Consumption per minute

Choose the **correct** answer from the options given below:

1. A-IV, B-I, C-II, D-III

2. A-I, B-II, C-III, D-IV

3. A-II, B-IV, C-I, D-III

4. A-IV, B-II, C-III, D-I

Options 1. 1

2. 2

3. 3

4. 4

Question Type : MCQ

Question ID : 3767496323

Option 1 ID : 37674924641

Option 2 ID : 37674924642

Option 3 ID : 37674924643

Option 4 ID : 37674924644

Status : Answered

Chosen Option : 1

Q.57

Arrange in ascending order of their establishment

- A. Christian College of Physical Education. Lucknow
- B. HVPM, Amrawati
- C. YMCA, Madras
- D. LCPE, Gwalior

Choose the *correct* answer from the options given below:

- 1. A, D, C, B
- 2. B, C, A, D
- 3. C, A, B, D
- 4. D, C, A, B

Options 1. 1

- 2. 2
- 3. 3
- 4. 4

Question Type : MCQ

Question ID : 3767496286

Option 1 ID : 37674924493

Option 2 ID : 37674924494

Q.118 What are the models of situational Leadership theory of management?

- A. Fiedler's contingency model
- B. Path-goal model
- C. Situational Leadership model
- D. Scientific leadership model
- E. Full range of leadership model

Choose the **correct** answer from the options given below:

1. A, B, C, E Only

2. A, C, D Only

3. A, B, C Only

4. B, C, D, E Only

Options 1. 1

2. 2

3. 3

4. 4

Question Type : MCQ

Q.121 Sequence of Recovery is

- A. Anabolic in nature
- B. Re - synthesis of ATP and glycogen
- C. Neutralization of Lactic Acid
- D. Restoration of Homeostasis

Choose the *correct* answer from the options given below:

1. A, B, C, D
2. B, C, D, A
3. C, D, A, B
4. D, A, B, C

Options 1. 1  
2. 2  
3. 3  
4. 4

Q.127

Match the LIST-I with LIST-II

LIST-I		LIST-II	
A.	Body mass index	I.	Height (cm) minus 100
B.	Ponderal index	II.	$\frac{\text{Weight(kg)}}{\text{Height}^2(\text{m})}$
C.	Broca index	III.	$\text{Height(cm)} - 100 - \frac{\text{Height (cm)} - 150}{2(\text{Women) or } 4(\text{Men})}$
D.	Lorentz's formula	IV.	$\frac{\text{Height (cm)}}{\text{Cube root of body Weight(kg)}}$

Choose the **correct** answer from the options given below:

1. A-IV, B-III, C-II, D-I
2. A-III, B-IV, C-II, D-I
3. A-I, B-II, C-III, D-IV
4. A-II, B-IV, C-I, D-III

- Options
1. 1
  2. 2
  3. 3
  4. 4

**Comprehension:**

Extraneous variables are factors that could affect relationship between the independent and dependent variables but are not included.

The independent variable in the experimental or treatment variable, it is cause. The dependent variable is measured to assess the effects of independent variables. A categorical variable sometimes called a moderator variable, for example gender or race.

An experiment was done on the effect of synchronous and asynchronous movement to music on endurance performance. One group with synchronized music, one group with not synchronized music and one group with no music separately for men and women were taken with same intensity of workload. It was speculated that same difference in the performance of men and women might be due to the women's reluctance to exhibit maximum effort in the presence of male.

The decision to include or exclude some variable depends on several considerations such as whether the variable is closely related to the theoretical model and how likely there is to be an interaction.

**SubQuestion No : 141**

Q.141

In all experimental research, it should have control variable?

1. Always
2. Never
3. Sometime
4. Decision of Researcher

Options 1. 1

2. 2

**Comprehension:**

A hormone is chemical substance secreted into the body fluids by an endocrine gland and has a specific effect on the activities of other organs (target organs). An endocrine gland is ductless and secretes a hormone directly on to the blood or lymph's. The actions of hormones are target organs include: (1) Activation of enzymes systems, (2) Alterations of cell membrane permeability, (3) Muscular contraction or relaxation, (4) Protein Synthesis, or (5) Cellular Secretion. This actions are brought about through a mechanism referred to as the cyclic AMP mechanism. Some hormones have an effect only on specific target organ. The predominant hormonal control system is negative feedback mechanism. The nervous system is also involved in the control of hormone secretion. The hormones and their endocrine glands, include the following: 1) The Pituitary Gland: ADH, Oxytocin, GH, TSH, ACTH, FSH, LH and prolactin, 2) The Adrenal Glands: The catecholamine, epinephrine and non-epinephrine, mineralocorticoids, glucocorticoids and endogens, 3) Pancreas: Insulin and Glycogen 4) The thyroid Gland: Thyroxin, triiodothyronine and calcitonin, 5) The Para-Thyroid gland: PTH, 6) Ovaries and Testes: Androgen.

Blood level of hormones known to increase with exercise include: GH, catecholamine, ACTH, Glucocorticoids, Mineralocorticoids, Glucagon, Testosterone, estrogen, progesterone, TSH, Thyroxin and triode thyroxine. Blood level of Luteinizing hormone do not change with exercise whereas insulin decreases during exercise.

**SubQuestion No : 146**

Q.146

Which hormone do not change with exercise

1. ACTH

2. LH

3. FSH

4. ADH

Options 1. 1

2. 2

3. 3

4. 4

Question Type : MCQ

Question ID : 3767496338

Option 1 ID : 37674924693

Option 2 ID : 37674924694

Option 3 ID : 37674924695

Option 4 ID : 37674924696

Status : Answered

Chosen Option : 4

**Comprehension:**

A hormone is chemical substance secreted into the body fluids by an endocrine gland and has a specific effect on the activities of other organs (target organs). An endocrine gland is ductless and secretes a hormone directly on to the blood or lymph's. The actions of hormones are target organs include: (1) Activation of enzymes systems, (2) Alterations of cell membrane permeability, (3) Muscular contraction or relaxation, (4) Protein Synthesis, or (5) Cellular Secretion. This actions are brought about through a mechanism referred to as the cyclic AMP mechanism. Some hormones have an effect only on specific target organ. The predominant hormonal control system is negative feedback mechanism. The nervous system is also involved in the control of hormone secretion. The hormones and their endocrine glands, include the following: 1) The Pituitary Gland: ADH, Oxytocin, GH, TSH, ACTH, FSH, LH and prolactin, 2) The Adrenal Glands: The catecholamine, epinephrine and non-epinephrine, mineralocorticoids, glucocorticoids and endogens, 3) Pancreas: Insulin and Glycogen 4) The thyroid Gland: Thyroxin, triiodothyronine and calcitonin, 5) The Para-Thyroid gland: PTH, 6) Ovaries and Testes: Androgen.

Blood level of hormones known to increase with exercise include: GH, catecholamine, ACTH, Glucocorticoids, Mineralocorticoids, Glucagon, Testosterone, estrogen, progesterone, TSH, Thyroxin and triode thyroxine. Blood level of Luteinizing hormone do not change with exercise whereas insulin decreases during exercise.

**SubQuestion No : 147**

Q.147

**What is negative feedback mechanism?**

1. Predominant hormonal control
2. Specificity of hormone receptor
3. Muscular Contraction or relaxation
4. Imbalanced pancreatic function

Options 1. 1

2. 2

3. 3

4. 4
