PURSLANE

(*Portulaca oleracea*)

A delicious "weed" packed
with vitamins & omega 3's!

Portulaca oleracea

Scientists integrated two metabolic pathways to produce a novel type of photosynthesis that enables the weed to withstand drought while remaining highly productive.

A common weed and succulent— *Portulaca oleracea*, commonly known as purslane, offers important clues about creating drought-tolerant crops in a world beset by climate change.

Purslane has the evolutionary adaptations that help it to be both highly productive and drought tolerant, an unlikely combination for a plant.

Other uses: *Portulaca oleracea* has been used as a folk medicine in many countries, acting as a febrifuge, antiseptic, and vermifuge.

Tetrapod-based Sea wall for reducing Coastal Erosion

Under the government's Coastal conservation project, a tetrapod-based seawall has been implemented in Kerala's Ernakulam district.

The conventional seawall of Chellanam failed to check sea ingress which resulted in massive ruin and destruction. Now, due to the tetrapod-based seawall, stretches that were most vulnerable to sea erosion have remained by and large safe.

Other solution: Beach nourishment (reducing the depth of the sea along the shore) offers a permanent solution.
