Question ID:	<a href="#">1185741</a>
Question Type:	MCQ
Question:	<p><b>Read the passage given below to answer.</b></p> <p>In our day-to day life, we assign certain causes or reasons to a person's behaviour. This process is called attribution. Broadly, causes of a person are attributed to internal and external factors. Internal factors are related to situation. With reference to success and failure, Weiner has classified causes into internal/external and stable/unstable factors. In general, people attribute success to internal factors such as their ability and hard work. However, failure is attributed to external factors such as task difficulty and bad luck. Ability/fate and hard-work/task-difficulty are considered as stable and unstable factors respectively. Stable factors refer to those causes that do not change with time. It has been</p>

observed that people have a tendency to give greater weightage to internal factors than external one. This phenomenon is called the fundamental attribution error. This tendency is stronger in some cultures than in others. Research suggests that Indians tend to make more external attributions than Americans do.

Question:

Match **List - I** with **List - II**.

**List - I**

**(Characteristics)**

- (A) Task characteristics
- (B) Hard work
- (C) Fate
- (D) Ability

**List - II**

**(Causal factors)**

- (I) Internal-stable
- (II) External-stable
- (III) Unstable-Internal
- (IV) Unstable-External

Choose the **correct** answer from the options given below :

- (1) (A) - (I), (B) - (II), (C) - (III), (D) - (IV)
- (2) (A) - (II), (B) - (IV), (C) - (III), (D) - (I)
- (3) (A) - (III), (B) - (I), (C) - (IV), (D) - (II)
- (4) (A) - (IV), (B) - (III), (C) - (II), (D) - (I)

A:

1

B:

2

C:

3

Question:

**Read the passage given below to answer.**

In our day-to day life, we assign certain causes or reasons to a person's behaviour. This process is called attribution. Broadly, causes of a person are attributed to internal and external factors. Internal factors are related to situation. With reference to success and failure, Weiner has classified causes into internal/external and stable/unstable factors. In general, people attribute success to internal factors such as their ability and hard work. However, failure is attributed to external factors such as task difficulty and bad luck. Ability/fate and hard-work/task-difficulty are considered as stable and unstable factors respectively. Stable factors refer to those causes that do not change with time. It has been observed that people have a tendency to give greater weightage to internal factors than external one. This phenomenon is called the fundamental attribution error. This tendency is stronger in some cultures than in others. Research suggests that Indians tend to make more external attributions than Americans do.

As per Weiner, if person A gives greater weightage to internal factors, then which one of the following will hold true for A ?

- (1) The task characteristic
- (2) A's intelligence
- (3) A's luck
- (4) Pleasant weather conditions

A:	1
B:	2
C:	3
D:	4

Question:	<p><b>Read the passage given below to answer.</b></p> <p>A person's thinking or behaviour is classified as abnormal if it violates social norms. Norms are expected behaviour in a group. Every culture has certain standards for accepting behaviour as per socially acceptable norms. For example - child marriage was a norm about hundred years ago. Those who did not marry their girl child like everyone else were considered to be breaking the norm. The most obvious problem with defining abnormality using social norms is that there is no universal agreement over social norms. Another definition of abnormality states that a person is considered abnormal if he/she is unable to perform the behaviours necessary for day-to-day living eg. self care, holding a job, managing everyday tasks. We must understand that mental health issues are prevalent in all cultures as there is ignorance and fear about psychological disorders. It is believed that these</p> <p>'A person's thinking or behaviour is classified as abnormal if it isolates social norms'. This statement refers to the concept of _____ in Abnormal Psychology.</p> <p>(1) Deviance  (2) Distress  (3) Dysfunction  (4) Danger</p>
A:	1
B:	2
C:	3
D:	4
