1. A 27 year old patient was diagnosed to be having borderline leprosy and was started on MB-MDT. Six weeks later, the patient developed pain in the nerves and redness and swelling of the skin lesions. All of the following should be included in the management of this patient, except:

a. Stopping of the leprosy treatment

b. Systemic corticosteroids

c. Rest to the affected limbs

d. Analgesics

2. Which out of the following would be the drug of choice in a woman with second trimester pregnancy, presenting with pustular psoriasis?

a. Prednisolone

b. Dapsone

c. Acitretin

d. Methotrexate

3. A male patient presents with patchy loss of hair on scalp, eyebrows and beard. He also gives a history of rapid graying of hair in few areas. Which out of the following conditions could be the probable diagnosis?

a. Alopecia areata

b. Anagen effluvium

c. Telogen effluvium

d. Androgenetic alopecia

All of the following are the markers of bone resorption, except:

a. Urine hydroxyproline

b. Urine deoxypridinoline

c. Serum TRAP levels

d. Serum osteocalcin

5. All of the following are true about the 'cauda equina' syndrome, except:

a. Symmetrical paralysis

b. Lower motor neuron type lesion

c. Areflexia

d. Bowel bladder involvement

6. In which of the following conditions is the 'three point bony relationship' maintained?

a. Elbow dislocation

b. Fracture medial condyle of humerus

c. Fracture lateral condyle of humerus

d. Supracondylar fracture of humerus

7. Hotchkiss terrible triad of elbow does not include:

a. Elbow dislocation

b. Fracture olecranon

c. Fracture radial head

d. Fracture coronoid

8. Boxer's fracture is:

- a. Extraarticular fracture of the first metacarpal base.
- Intraarticular fracture of the first metacarpal base.
- c. Fracture of the fifth metacarpal neck.
- d. Fracture of the second metacarpal base.

9. Multiple cannon ball lesions if present in chest X-ray is suggestive of which of the following conditions?

a. Metastases

b. Tuberculosis

c. Actinomycosis

d. Pneumoconiosis

10. On chest X-ray, effacement of right heart border is a sign of:

a. Collapse of upper lobe of lung

b. Collapse of middle lobe of lung

c. Collapse of lower lobe of lung

d. All of the above

11. 'Swirl sign' is / in:

a. Hypodense area within hyperdense acute haematoma.

b. Old calcified haematoma.

c. Blood in sylvian fissure.

d. Re-haemorrhage within an organized haematoma.

12. 'Snowstorm appearance' on ultrasound is seen in:

a. Ectopic pregnancy

b. Hydatidiform mole

c. Fibroid uterus

d. Abortion

13. Which of the following is the investigation of choice for detection of gall stones?

a. X-ray abdomen

b. Ultrasonography abdomen

c. Computerised tomography scan (CT scan) abdomen

d. Magnetic Resonance Cholangiopancreatography (MRCP).

14. Among the undermentioned contrast media, which one is the most appropriate for detecting a suspected leak in the gastrointestinal tract?

a. Thin barium

b. Thick barium

c. Ionic water soluble

d. Non-ionic water soluble

15. What would be the type of study design, if during the study period, data related to association between low birth weight and maternal smoking is studied by obtaining history of smoking by the women at the time of their antenatal visits, and then subsequently a correlation between birth weight and history of smoking is drawn?

a. Case control study

b. Cohort study

c. Randomised controlled trial

d. Cross-sectional study

16. To which of the under-mentioned parameters does the 'Goal'-6 of the Sustainable Development Goals, pertain to?

a. Health

b. Education

c. Gender equality and women empowerment.

d. Clean water and sanitation.

17. As per the national guidelines for the treatment of malaria, which of the undermentioned drugs, is the drug of choice in the management of malaria due to Plasmodium falciparum, in a female, who is in her first trimester of pregnancy?

a. Artesunate + pyrimethamine-sulfadoxine combination therapy.

b. Chloroquine

c. Quinine

d. Artemether + lumefantrine combination therapy.

18. Which of the under-mentioned choices denotes the amount of calories and proteins respectively, that should be provided to a severely malnourished 5 year old child under the ICDS scheme in India?

a. 500 Kcal, 12-15 g

b. 600 Kcal, 18-20 g

c. 800 Kcal, 20-25 g

d. 1000 Kcal, 20-25 g

19. The definition of extensively drug resistant tuberculosis (XDR-TB) includes:

a. MDR cases with resistance to any fluoroquinolone.

 MDR/RR-TB cases with resistance to any fluoroquinolone, and at least one additional group A drug.

c. Resistance to isoniazid and rifampicin, with or without resistance to other first line anti-TB drugs.

d. Resistance to more than one first line anti-TB drug, other than both Isoniazid and Rifampicin.

20. 'World Breast Feeding Week' is celebrated in:

a. 1st week of March

b. 1st week of July

c. 1st week of August

d. 1st week of December

- 21. Which of the following statements is true about the 'National Deworming Day?'
 - a. It is observed every month.
 - b. Children within the age group of 1 to 19 years are covered in it.
 - c. Diethyl carbamazine is the drug that is administered in this programme.
 - d. It is an initiative undertaken by the Ministry of Education.
- 22. 'Leprosy eradication' means:
 - a. Less than one case per 1000 population.
 - b. Less than one case per 10,000 population.
 - c. 1-5 cases per 10,000 population.
 - d. 5-10 cases per 10,000 population.
- 23. Which of the under-mentioned statements is correct regarding 'Mission Indra Dhanush'?
 - a. It is programme regarding providing safe environment.
 - b. It is a programme regarding care of pregnant women.
 - c. It is an activity to boost immunisation of children and unimmunised pregnant women.
 - d. It is an activity to boost good rainfall for bumper crops.
- 24. Each year, the 'World Health Day' is celebrated on:

a. 30th January

b. 7th April

c. 11th July

d. 1st December

- 25. A 2 year old unvaccinated child presents with fever, cough, sneezing along with dusky red maculopapular rash, which had started behind the ears and had spread rapidly to the face, neck and body. His most probable diagnosis is:
 - a. Small pox

b. Chicken pox

c. Measles

d. Whooping cough

- 26. Under the ambit of the 'National Vector Borne Disease Control Programme (NVBDCP),' which of the following disease is not covered?
 - a. Filariasis

b. Japanese encephalitis

c. Chikungunya

- d. Cutaneous Leishmaniasis
- 27. Which of the following diseases was not covered under 'Vision 2020' programme in India?
 - a. Glaucoma

b. Diabetic retinopathy

c. Corneal blindness

- d. Onchocerciasis
- 28. The 'UJJAWALA scheme' started by Ministry of Women & Child Development is for:
 - a. Providing LPG connection to families below poverty line.
 - b. Improving the quality of the labour rooms.
 - c. Preventing trafficking of women and children.
 - d. Providing home based newborn care by ASHA.
- The 'LaQshya Program' launched by the Government of India refers to:
 - a. Initiative for control of vector borne diseases.
 - b. Initiative for providing vaccination to under 5 children.
 - c. Initiative to improve quality of care in labour rooms at public health facilities.
 - d. Initiative to provide affordable health care.

30.	The aim of the 'Mid-day meal' programme is to supplement: a. Half of the protein and one-third of the daily calorie requirement. b. One-third of the protein and one-third of the daily calorie requirement. c. Half of the protein and half of the daily calorie requirement. d. One-third of the protein and half of the daily calorie requirement.			
31.	Which out of the following figure denotes the as per the 'National Programme for Preven a. 12.2% c. 05.1%			
32.	Which out of the following figure denotes units, IU), that is administered for proph Prophylaxis programme? a. 2000 IU c. 20,000,000 IU			
33.	A staff working in the cotton textile indu presented to the hospital with chronic cougl the following could be the probable type of a. Silicosis c. Byssinosis	h and progressive dyspnoea. Which out of		
34.	All of the following are the criteria for high-ria. Short statured primigravida (height, 140 ob. Elderly primigravida (age 30 years and obc. Blood pressure of 118/78 mmg. d. History of previous delivery by caesarear	cm and below). ver).		
35.	Which of the following thyroid malignancy is a. Follicular c. Medullary	s common after radiation exposure? b. Papillary d. Anaplastic		
36.	Cullen's sign is: a. Bluish discoloration of the flanks b. Bluish discoloration around umbilicus c. Migratory thrombophlebitis d. Subcutaneous fat necrosis			
37.	For which of the following condition is the H	leller's operation performed?		
	a. Achalasia cardia	b. Hiatus hernia		
	c. Diaphragmatic hernia	d. Reflux oesophagitis		
38.	Who among the following said, "Skin is the a. Joseph Lister c. James Paget	best dressing?" b. John Hunter d. Mc Neill Love		
39.	Which out of the following is the most comm	non site for developing of chronic fissure in		
	ano? a. Anterior	b. Posterior		
	c. Lateral	d. Anterolateral		
40.	Which of the following condition is associate a. Cold clammy skin	ed with septic shock? b. Tachypnea		
	c. Bradycardia	d. Polyuria		

41.	The minimum area of the land required to called:	completely sustain life of one person is
	a. Biota c. His ecological footprint	b. Biome d. Niche
42.	What out of the following is present in the a driver?	
	Sodium bicarbonate Sodium nitrite	b. Sodium azide d. Sodium peroxide
43.	Which of the following scientist had a majo who also had developed a primitive microso a. Robert Koch c. Robert Boyle	
44.	The 'blue baby pollution disease' is due to following in the drinking water?	All assume the second
	a. Fluoride	b. Chloride
	c. Nitrate	d. Arsenic
45.	The 'Kyoto Protocol" is an international treduction in:	reaty that commits the State parties to
	a. Poverty	b. Greenhouse gases emission
	c. Nuclear armaments	d. Agricultural subsidy
46.	Which of the following is not a discipline AYUSH?	that is under the domain of Ministry of
	a. Ayurveda	b. Allopathy
	c. Unani	d. Siddha
47.	Which of the following Indian scientist had the Prize but also the Bharat Ratna?	e distinction of receiving not only the Nobel
	a. Dr. Vikram Sarabhai	b. Dr. J. C. Bose
	c. Dr. C. V. Raman	d. Dr. Homi Jehangir Bhabha
48.	'Constitution Day of India' is celebrated ever	rv vear on:
	a. 26 th October	b. 26 th November
	c. 26 th January	d. 15 th August
49.	The book 'Long Walk to Freedom' is written	hv:
	a. Mahatma Gandhi	b. Nelson Mandela
	c. Martin Luther King	d. John F. Kennedy
50.	Who among the following is a famous 'Santo	oor player'?
00.	a. Shiv Kumar Sharma	b. Hari Prasad Chaurasia
	c. Ravi Shankar	d. Zakir Hussain
51.	Which among the following is the most comappendicectomy?	mon site where appendix is found during
	a. Retro-ileal	b. Retro-caecal
	c. Ectopic	d. Anterior to terminal ileum
52.	An injury to which of the following nerve lead	de to 'winging of ecentule'?
JZ.	a. Ulnar nerve	b. Long thoracic nerve
	c. Phrenic nerve	d. Median nerve

53.	Which of the following structure s nerve block?	erves as the 'anatomical landmark' for the pudendal
	a. Ischial tuberosity	b. Pubic tubercle
	c. Ischial spine	d. Anterior superior iliac spine

54. Which of the following nerve divides the parotid gland surgically into superficial and deep parts?

a. Fifth cranial nerve
c. Seventh cranial nerve
d. Eighth cranial nerve

- 55. Carbon dioxide retention is rarely a problem in a patient with alveolar fibrosis because:
 - a. Diffusion capacity of lungs for the carbon dioxide is much greater than the diffusion capacity for oxygen.
 - Diffusion capacity of lungs for oxygen is much greater than diffusion capacity for carbon dioxide.
 - c. Carbon dioxide passes through all biological membranes with difficulty.
 - d. pCO2 of venous blood is 46 mm Hg.
- 56. In a patient of haemorrhagic shock there occurs:
 - a. Vasodilatation of cutaneous blood vessels.
 - b. Vasodilatation of splanchnic circulation.
 - c. Vasodilatation of coronary circulation.
 - d. Vasoconstriction of cerebral circulation.
- 57. Rapid action of the drug 'albuterol,' which is used in the bronchial asthma, is mediated through:

a. Beta adrenergic receptors

b. Alpha adrenergic receptors

c. Muscarinic receptors

d. Nicotinic receptors

- 58. Narcolepsy is triggered by abnormalities of:
 - a. Skeletal muscle

b. Medulla oblongata

c. Hypothalamus

d. Neocortex

- 59. Mitochondrial DNA is inherited from:
 - a. Mother

b. Father

c. Both

d. None

60. When a blood sample is collected in a heparinised tube and centrifuged, it will get separated into:

a. Serum and clot

b. Plasma and clot

c. Serum and RBCs

d. Plasma, buffy coat and RBCs

61. All of the following hormones are hyperglycaemic, except:

a. Insulin

b. Thyroxine

c. Cortisol

d. Growth hormone

62. A 70 year old diabetic patient presented to the emergency department with signs of dehydration as a result of severe vomiting. The doctor on duty administered to the patient a parenteral medication to treat vomiting, following which the patient developed grimacing and abnormal posture. Which out of the following could have been the inciting drug for this reaction?

a. Promethazine

b. Hydroxyzine

c. Metoclopramide

d. Domperidone

63.	A patient, 50 years of age, presented with a with a frequency of more than three attack around 24 hours. Which of the following druattacks?	s per month, with each episode lasting for
	a. Phenytoin	b. Valproic acid
	c. Ethosuximide	d. Lamotrigine
64.	Which of the following antimicrobial agent r a. Rifampicin	needs dose reduction in renal failure? b. Clindamycin
	c. Amphotericin B	d. Doxycycline
	o. Amphotenem B	d. Doxycycline
65.	Which among the following conditions is an state?	acquired cause of hypercoagulable
	a. Antithrombin III deficiency	b. Factor V Leiden thrombophilia
	c. Heparin induced thrombocytopenia	d. Protein 'C' deficiency
66.	Which out of the following is the best test for	or the assessment of iron status?
	a. Serum transferrin level	b. Serum ferritin level
	c. Serum iron concentration	d. Haemoglobin level
67.	Which one of the following poisons retards	putrefaction?
	a. Lead	b. Copper
	c. Arsenic	d. Mercury
68.	Fixation of post-mortem hypostasis occurs	
	a. 2 to 3 hours	b. 6 to 12 hours
	c. 12 to 18 hours	d. After 24 hours
69.	Which out of the following choices is the be sex of an individual from skeletal remains?	
	a. Skull	b. Pelvis
	c. Femur	d. Mandible
70.	Which among the following does not enter	the human body through skin?
	a. Ancylostoma duodenale	b. Strongyloides stercoralis
	c. Trichinella spiralis	d. Necator americanus
74	0 11 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	
71.	Scalded skin syndrome is mediated by: a. Haemolysin	h Cangulana
	c. Enterotoxin	b. Coagulase d. Epidermolytic toxin
	C. Litterotoxiii	d. Epidermolytic toxin
72.	Which of the following condition can occur a. Ptosis	as a result of fifth cranial nerve palsy? b. Proptosis
	c. Neuropathic keratopathy	d. Lagophthalmos
70		
73.	A two month old child is brought to the ophi and watery eyes since birth. Which of the for this condition, at this stage?	
	a. Syringing	b. Probing
	c. Sac massage	d. Dacryocystorhinostomy
74.	Reactionary harmorrhage after toneillester	ov coours:
74.	Reactionary haemorrhage after tonsillecton a. After two weeks of tonsillectomy	
	c. During first 24 hours of tonsillectomy	b. After 72 hours of tonsillectomy d. None of the above
	o. During mat 24 hours of tonsinectority	d. Notic of the above

75.	In which of the following anatomical sites is the fungal ball most commonly encountered?		
	a. Maxillary sinus	b. Ethmoid sinus	
	c. Sphenoid sinus	d. Frontal sinus	
76.	All of the following antimicrobials are used a. Doxycycline	b. Amoxycillin + clavulanic acid	
	c. Clindamycin	d. Sulfadoxine + Pyrimethamine	
77.	Which out of the following is the most common Rheumatic heart disease?	mon valvular abnormality seen in	
	Aortic stenosis	b. Tricuspid stenosisd. Pulmonary stenosis	
78.	Which one out of the following is the most of a. Alexia	common finding in an aphasic patient? b. Anomia	
	c. Impaired comprehension	d. Impaired fluency	
79.	All of the following drugs are used in the mexcept:	anagement of hepatic encephalopathy,	
	a. Lactulose	b. Rifaximin	
	c. L-ornithine L-aspartate	d. Diazepam	
80.	A primary tumour of which of the following bones?		
	a. Breast	b. Colon	
	c. Kidney	d. Lung	
81.	All of the following clotting factors are formation. Factor II	ed by the hepatocytes, except: b. Factor VII d. Factor IX	
82.	All of the following are the risk factors for d disease, except:	eveloping chronic obstructive pulmonary	
	a. Coal dust exposure c. Cigarette smoke exposure	 b. Airway hyperresponsiveness d. Recurrent respiratory infections 	
83.	All of the following are RNA viruses, excep a. Human Immunodeficiency virus c. Coronaviruses	t: b. Herpes Simplex virus d. Cytomegalovirus	
84.	and slightly tender. On per vaginal examin- mass of size 3 cm x 2 cm could be felt in the the likely diagnosis in this case?	with pain abdomen for the last one day. On BP-110/70 mm Hg, abdomen – not tense ation, cervical os was closed, and a tender ne right fornix. Which out of the following is	
	a. Abortion	b. Corpus luteal cyst	
	c. Unruptured ectopic pregnancy	d. Ruptured ectopic pregnancy	

85.	A 16 year old female presented to the gynaecology outpatient department with chief
	complaints of not having attained menarche as yet, and experiencing cyclical pain in
	the lower abdomen for the last one year. On examination, per abdomen supra-pubic
	bulge was present. Secondary sexual characteristics were normal. On local
	examination, bluish coloured bulge at hymen was present. Which out of the
	following could be the most probable diagnosis?

a. Pregnancy

b. Cryptomenorrhea

c. Full bladder

d. Congenital adrenal hyperplasia

86. Which condition out of the following is not a contraindication for ventouse delivery?

a. Occipito-transverse position

b. Prematurity

c. Face presentation

d. Suspected fetal coagulation disorder

87. Which out of the following is not an early sign of uterine scar rupture?

- a. Variable deceleration
- b. Shock
- c. Pain abdomen persisting in between contractions.
- d. Bleeding per vaginum.
- 88. Which out of the following is not a contraindication for TOLAC (trial of labour after caesarean)?
 - a. Previous history of classical caesarean.
 - b. Placenta praevia
 - c. Suspected CPD
 - d. Previous history of one lower segment caesarean section.
- 89. Which out of the following is an absolute contraindication for usage of intrauterine devices, as per the WHO?
 - Current episode of sexually transmitted disease.
 - b. Nulliparity
 - c. Past history of pelvic inflammatory disease.
 - d. Cardiovascular disease.
- Which out of the following is an absolute indication for caesarean section?
 - a. Previous caesarean delivery

b. Carcinoma cervix

c. Breech presentation

- d. Preeclampsia in current pregnancy.
- 91. Which out of the following is the most suitable contraceptive choice for use by a woman having menorrhagia and dysmenorrhea?
 - a. Levonorgestrel releasing intrauterine system.
 - b. Progesterone only pills.
 - c. Copper containing intrauterine devices.
 - d. Injectable contraceptives.
- 92. Pre-hypertension in paediatric population is defined as:
 - a. Blood pressure 90th-95th percentile for age, height and gender.
 b. Blood pressure 85th-95th percentile for age, height and gender.

 - c. Systolic blood pressure 85th-90th percentile for age, height and gender.
 - d. Diastolic blood pressure 85th-90th percentile for age, height and gender.
- 'Exanthema subitum' is caused by:

a. Rubella virus

b. Parvovirus

c. HHV-6

d. Parainfluenza virus

94.	Which out of the following is the to (laryngotracheobronchitis): a. Dexamethasone I/V b. Non-invasive ventilation c. Dexamethasone I/M & epinephrine I/M d. Dexamethasone I/M & nebulized epinephrine I/M	
95.	Which out of the following is the antiepilept seizures? a. Phenytoin c. Midazolam	ic drug of choice for treatment of neonatal b. Phenobarbital d. Valproate
96.	Which one out of the following is an incorre a. Can lead to malocclusion b. Is a source of great pleasure c. Is a sign of insecurity d. Must be treated vigorously in first year	ct statement about 'thumb sucking'?
97.	Which out of the following is the earliest sig a. Rachitic rosary c. Bow legs	n of rickets? b. Craniotabes d. Harrison's groove
98.	Extremely low birth weight baby is a baby va. Less than 1500 grams.	veighing: b. Less than 2000 grams. d. Less than 1250 grams.
99.	All of the following vitamins are in adequate a. Vitamin E c. Vitamin A	e quantity in the breast milk, except: b. Vitamin K d. Vitamin C
100.	Primary dentition is complete by the age of a. Six months c. Two and a half years	b. One year d. Four and a half years
