Read the given passage and answer the questions that follow.

Amelia Earhart, a pioneering aviator, mysteriously vanished on 2 July 1937, while attempting to circumnavigate the globe. Her disappearance remains one of history's greatest unsolved mysteries. Earhart and her navigator, Fred Noonan, were flying over the Pacific Ocean, en route to Howland Island, when they lost radio contact and were never seen again.

Numerous theories attempt to explain their fate. The most widely accepted theory suggests that their aircraft, a Lockheed Electra, ran out of fuel and crashed into the ocean. Another theory proposes that they landed on an uninhabited island, surviving for a time before succumbing to the elements. Some believe they were captured by the Japanese, possibly mistaken for spies.

Despite extensive search efforts by the US Navy and ongoing investigations, no conclusive evidence has ever been found. Fragments of possible wreckage and radio distress signals have surfaced over the years, but nothing has definitively solved the mystery.

Amelia Earhart's disappearance remains a topic of fascination, inspiring books, documentaries and expeditions. Regardless of the mystery, her legacy as a fearless aviator and a symbol of perseverance continues to inspire generations.
