El Niño 2023: Among the Strongest on Record

Context:

- The **World Meteorological Organisation (WMO)** announced on March 5 that the **2023-2024 El Niño is among the five strongest on record.**
- **Despite a weakening trend, the El Niño is expected to continue affecting the climate in the upcoming months.**

Key points:

- **Above-normal temperatures** are predicted over almost all land areas from **March to May.**
- The prevailing El Niño conditions have already caused record temperatures and extreme events worldwide, **with 2023 being the warmest on record.**
- The WMO forecasts a **60% chance of El Niño persisting during March-May** and an **80% chance of neutral conditions during April-June.**
- Scientists suggest that if La Niña conditions set in by June-August, it could lead to improved monsoon rains in India compared to 2023.

About:

- **El Niño refers to the periodic warming of the ocean surface** in the central and eastern tropical Pacific Ocean, occurring every two to seven years and lasting nine to twelve months.
- It is associated with **increased rainfall in the Horn of Africa and southern U.S.,** and **dry, warm conditions in Southeast Asia, Australia, and southern Africa.**
- According to WMO Secretary-General Celeste Saulo, **unusual high sea-surface temperatures persist globally for the past ten months, not solely explained by El Niño.**
- El Niño typically has the greatest impact on climate in its second year of development, notably in 2024.
- The current El Niño event, which began in **June 2023,** peaked in November-January, with temperatures about 2 degrees C above the 1991-2020 average.
- This El Niño event has significantly impacted societies and economies, with accurate seasonal forecasts helping countries prepare in climate-sensitive sectors like agriculture, water
