<p>Avian influenza</p>	<p>Why in news?</p> <ul style="list-style-type: none"> Andhra Pradesh has reported its first human death due to the H5N1 virus. <p>Key Points:</p> <ul style="list-style-type: none"> tion that primarily affects birds. The H5N1 avian influenza virus was first detected in 1996 in China ('H' and 'N' stand for hemagglutinin & neuraminidase, the proteins on the virus's surface that regulate entry and exit in host cells). These viruses (Type A) occur naturally among wild aquatic birds worldwide and can infect domestic poultry and other bird and animal species. Migrating waterfowl, most notably wild ducks, are the natural carriers of bird flu viruses. Strains of avian influenza viruses can generally be classified into two categories: <ul style="list-style-type: none"> Low pathogenicity avian influenza (LPAI) that typically causes little or no clinical signs; High pathogenicity avian influenza (HPAI) can cause severe clinical signs and possible high mortality rates. Human cases of H5N1 avian influenza occur occasionally, but it is difficult to transmit the infection from person to person.
